

Hello,

I wish to express my full support for all the various recommendations made by the VEAC Investigation for the Central West.

As a field naturalist and amateur entomologist with an agricultural/natural resources management background, I want to see more natural spaces set aside for the more passive pursuits such as birdwatching and nature study in general. It seems opportunities for these are diminishing, so more land devoted to preservation of habitat and biodiversity is a winner for me and my family.

Regards,  
William D. Elder
