LEGEND

- boundaries of supply or drainage areas
- channels
- pipelines

Notes:

1. This map indicates where the major water use areas are located. Sites of the many private irrigation and rural water use offtakes are not shown.
2. The volume of water used in each basin is listed in the text (see chapter 20). Note that there are many transfers of water between basins, particularly to supply the high-use areas on this map.
3. Channels and pipelines shown are only those major ones associated with extensive schemes. The positions of pipelines shown is diagrammatic.
